AMZAD FOOD

Completed Website | Page-wise Cost & Functionality

Prepared for: Amzad Food **Date:** 25 October 2026
Status: Completed design and frontend project - handover summary

Project brief

Responsive website design and frontend development for Amzad Food, covering the storefront, product browsing, shopping interfaces, order-related screens and content pages. This document allocates the BDT 20,000 project fee across the completed work for clear billing and handover.

9 main page templates

Product detail and blog article pages reuse their respective templates for individual items. The cart, Quick View, account forms and chat are shared interfaces rather than separate pages.

Page / deliverable	Amount (BDT)
Homepage	4,000
Product listing	2,000
Product details template	2,000
Checkout	2,500
My Orders	1,000
Track Order	1,500
Blog listing	1,000
Blog article template	1,000
FAQ	500
Shared features, responsive styling & handover	4,500
Total project fee	**20,000**

Amount in words: Twenty thousand Bangladeshi taka only.

The amounts above are a consolidated allocation of the total project fee for submission; they do not represent separately agreed page rates. Any advance already paid should be deducted when settling the bill.

Included functionality

Design, frontend interactions and handover scope

Area	Included functionality
Homepage & navigation	Hero sections, category navigation, featured products, brand/content sections, shared header/footer and mobile navigation.
Catalog & product details	Product search, category filters, sorting, pagination, product gallery, information tabs and related products.
Quick View & cart	Product preview, quantity selection, add/remove items, quantity updates, estimated totals and browser-persisted cart.
Checkout interface	Customer/address form, validation, promo codes, delivery calculation, Cash on Delivery presentation and device-saved order preview.
Order interfaces	Device-saved order history, status filters, tracking preview, status timeline and downloadable HTML invoice.
Content pages	Blog listing and article templates, related-product suggestions and FAQ interactions.
Shared features	Wishlist interface, account form interface, scripted support chat, WhatsApp/contact links, feedback form and sample prayer schedules.
Responsive design & handover	Layouts for mobile, tablet and desktop; project source code; setup/build instructions; backend handoff documentation.

Functional boundary

The completed delivery covers website design and frontend implementation. Cart and order previews use local browser storage. Account forms do not provide live login; online payment options are unavailable. Tracking and invoice views use local or labeled sample records.

Backend/API integration, database, admin dashboard, live authentication, payment gateway, inventory service and live order processing are separate work. Domain/hosting charges and third-party service fees are not included in this breakdown.

Submission & handover

Submitted as a completion and billing summary for the delivered frontend scope. Source code and supporting project documentation form the technical handover package.
