Design prompt library

Amzad Food / Design system, components and style guide / 9 November 2026

Warm. Natural.
Quietly confident.

Use the following prompts to create a consistent Amzad Food interface. Preserve a minimal editorial direction: generous spacing, restrained type weights, warm food photography and clear purchase actions. Adapt the prompts to the requested design tool or frontend stack without changing the brand language.

Master design prompt

Act as a senior product designer creating the Amzad Food design system for a bilingual Bangladeshi food storefront. Build a warm, premium and approachable visual language using deep green, warm cream, white surfaces and restrained orange accents. Pair Gelasio editorial headings with Plus Jakarta Sans body text, Manrope product names and Anek Bangla for Bengali. Prioritize concise copy, clear hierarchy, light typography and generous space. Create reusable tokens, responsive components and explicit interaction states. Keep the design grounded in food and packaging imagery. Deliver editable components with descriptive names and document their usage, responsive rules and accessibility behavior.

Shared quality constraints

Use approved product information where available. Label any dummy packaging, inventory or imagery as preview material. Avoid invented ratings, stock counts, customer numbers or product claims. Keep English and Bengali legible together. Provide desktop and mobile variants. Use semantic controls, visible keyboard focus, clear validation and reduced-motion alternatives. Use only the components and visual rules relevant to the requested scope.

The prompts below define a proposed reusable system aligned with the current project. They are authoring instructions, not a claim that a complete token library already exists.

Foundations & design tokens

Copy-ready prompt / visual foundations

Prompt: establish the foundations

Create a reusable token system for Amzad Food. Group tokens by color, typography, spacing, radius, border, shadow and motion. Use semantic names such as color.text.primary, color.surface.card, color.action.primary and color.border.default. Keep primitive values separate from semantic roles. Provide a light theme first; add another theme only when requested.

Token direction	Prompt values
Color	Use #234c3b for deep brand green, #17352a for primary ink, #246247 for supporting green, #ff6418 for strong action accents, #eb682d for warm promotional actions and #009b31 for price emphasis.
Surfaces	Use #f6f5ef for the page cream, #fffdf7 for warm panels, white for product/form cards and #f3f6ee for quiet supporting surfaces.
Text and borders	Use #718078 for supporting text and #dfe4dc for neutral borders. Check contrast at the final text size; darken muted text when necessary.
Spacing	Use a 4px base rhythm with 4, 8, 12, 16, 20, 24, 32, 40, 48 and 64px tokens. Allow a 10px compact product-content gap and 8px control gaps.
Radius	Use 8px for compact controls, 10-12px for fields and small panels, 16-24px for larger promotional surfaces, and full circles for badges or icon containers.
Borders and shadows	Prefer thin 1px gray-green borders. Use soft, low-opacity green-black shadows for elevated menus and dialogs. Keep ordinary cards visually quiet.

Prompt: token delivery

Show each token with its name, value, purpose and example. Bind components to semantic tokens. Provide a compact foundations board and a token table. Avoid scattering unexplained one-off colors or spacing values across components.

Typography, imagery & icon style

Copy-ready prompt / brand expression

Prompt: typography system

Define a bilingual type system using Gelasio for editorial headings, Plus Jakarta Sans for body text and controls, Manrope for product names, and Anek Bangla for Bengali. Prefer regular and medium weights; reserve semibold for prices, key labels and active states. Use a restrained italic orange phrase in major editorial headlines. Keep Bengali text natural and readable with sufficient line height and no forced Latin letter spacing.

Role	Recommended design instruction
Display and hero	Use an expressive serif with compact line breaks, clear hierarchy and comfortable whitespace. Scale to viewport; avoid oversized headings that crowd product imagery.
Section headings	Use a quieter serif hierarchy, around 24-32px as a starting point. Pair with short optional supporting text.
Product titles	Use Manrope around 14-16px on desktop and 13-14px on mobile. Keep bilingual text aligned and limit overflow without hiding essential product identity.
Body and controls	Start body text at 14-16px with 1.5-1.7 line height. Compact card labels may be smaller when legible. Keep field inputs at a usable mobile size.
Price	Use green and a clear size difference from secondary information. Old price is smaller, muted and struck through when a real discount exists.

Prompt: food imagery

Use clean product cutouts with consistent framing, soft natural shadows and calm neutral backgrounds. Preserve packaging proportions and image clarity. For temporary quantity previews, show one, two or three repeated product images for packs and progressively larger artwork for weight or volume. Label these as dummy previews in design annotations. Replace with approved pack-specific photography before production.

Prompt: icons

Use a consistent Lucide-style outline family with balanced stroke width. Use recognizable icons for search, cart, account, close, delivery and navigation. Add text labels or accessible names. Maintain contrast on light and dark surfaces; use dark-green cart artwork on the white mobile header.

Product cards & purchase controls

Copy-ready prompt / component family

Prompt: product card

Design a reusable bilingual product card for Amzad Food. Include a clean product image area, optional best-selling and discount badges, a quick-view icon, English/Bangla product name, green current price, optional muted old price, quantity pills, an outlined orange Order Now button and a separate cart icon button. Use a white surface, subtle green-gray border and restrained radius. Keep the card visually light. Provide a horizontal desktop version for the two-column top-selling grid and a compact mobile version.

Prompt: spacing and alignment

Use approximately 10px between product name, price and quantity groups; use 8px between quantity pills and between action buttons. Give the action row a little additional top space. Align prices and actions across a grid where practical. Preserve clear image space above the text and avoid crowding the card edges.

Prompt: variants and image response

Create default, hover, keyboard-focus, selected and unavailable quantity-pill states. Selecting a quantity must update the active pill, image preview, quantity label and price as one coherent state change. Show a 1-pack, 2-pack and 3-pack demonstration plus smaller and larger weight previews. Do not imply stock availability unless real inventory data is provided.

Prompt: card states

Show default, hover, in-cart, loading and unavailable states. The cart control should clearly indicate when a product is already in the cart while allowing another addition when appropriate. Keep Order Now as the prominent action and preserve the separate cart affordance. Include missing-image and long-name examples.

Prompt: button family

Create primary filled, outlined purchase, secondary text and icon-only buttons. Document hover, pressed, focus-visible, loading and disabled states. Use orange for purchase emphasis, green for secondary brand actions and neutral tones for low-priority actions. Maintain usable touch targets, even when the visible icon is small.

Navigation, live search & filtering

Copy-ready prompt / discovery components

Prompt: header and mobile navigation

Create responsive navigation for Amzad Food with a brand logo, primary links, search, account and cart. Add a compact mobile support strip with WhatsApp, phone and Track Order. Keep the logo readable and avoid compressing the action icons. Use a clear hamburger control and a visible dark-green cart icon with an orange count badge on white. Provide an expandable mobile menu and fixed bottom navigation with safe-area spacing.

Prompt: live search

Design a live search component that shows matching products as the user types. Use a floating white results panel with a subtle border and shadow. Include the match count, product thumbnail, English and Bangla names, green price and a clear route to product details. Keep results compact and scrollable. Show up to eight suggestions in the visible design example. Include default, focused, populated, empty and loading states; loading applies only if connected to a remote service.

Prompt: search interaction

Keep the panel available while users move focus into a result. Allow keyboard access to results and Escape dismissal. Provide visible focus and a concise no-results message. Match English/Bangla names, categories and brands. If implementing the current local model, use case-insensitive keyword matching with every query word required; do not describe it as fuzzy or AI search.

Prompt: filter and category controls

Create category pills, a horizontal category rail, sort menu, filter sidebar or mobile drawer, active filter chips, clear-all control and pagination. Use active styles that remain identifiable without relying only on color. Keep the result area stable while filters change. Include selected, empty-results and disabled-pagination states.

Forms, dialogs & promotional UI

Copy-ready prompt / input and overlay components

Prompt: form field system

Design consistent text, telephone, email, select and textarea fields. Include a clear label, optional marker where appropriate, concise hint, validation error and keyboard-focus state. Use white surfaces, subtle green-gray borders and comfortable padding. Keep validation attached to the relevant field. Provide default, focused, filled, error and disabled variants.

Prompt: Bangladesh phone field

Create a single rounded telephone field with a fixed +880 prefix on the left, a short thin vertical divider and the editable national number on the right. Use one continuous outer border. Remove any inner input border, rounded inner edge or separate focus ring. On focus, use a restrained green outer border or subtle halo. Preserve the error border and accessible input label. Match the reference style with calm spacing and lightweight typography.

Prompt: offer popup

Design a compact premium offer dialog with a deep-green artwork panel and warm-cream content panel. Spotlight the product inside a soft cream circle with restrained decorative accents. Use the short headline Good food. Better deals., with the second line italic and orange. Show a small free-delivery benefit for orders BDT 1,000+, an orange Shop offers button, a quiet Maybe later action and an accessible close control. Keep copy minimal. Stack artwork above content on mobile.

Prompt: overlay behavior

Specify backdrop dismissal, Escape handling, focus entry, Tab containment, focus restoration and background scroll locking. Use a short subtle reveal transition and provide a reduced-motion alternative. Allow dialog content to scroll on short viewports without hiding the close action or primary button.

Prompt: status components

Create cart badges, inline alerts, compact toasts, loading placeholders and empty-state panels. Use clear language and recognizable icons. Avoid fabricated success messages for services that are not connected. Keep confirmation, error and informational states visually distinct.

Style guide & accessibility rules

Copy-ready prompt / usage and consistency

Prompt: editorial style guide

Write a concise style guide for Amzad Food. Describe the brand as warm, natural, trustworthy and approachable. Use brief, concrete language. Keep headlines short, supporting copy purposeful and action labels explicit. Pair English and Bengali without crowding. Use food-led storytelling sparingly and keep purchase information easy to scan. Avoid exaggerated health, purity or delivery claims without approved evidence.

Prompt: composition rules

Use generous whitespace, a clear primary action and a limited number of visual accents. Group related content through spacing before adding extra borders or colored boxes. Use cream for the canvas, white for content and deep green for selected editorial moments. Reserve strong orange for actions and promotional emphasis. Keep imagery crisp and prevent decorative elements from competing with the product.

Prompt: responsive rules

Provide desktop, tablet and mobile component examples. Use 800px as the primary current mobile breakpoint and 600px for the stacked offer-dialog treatment. Demonstrate long bilingual names, narrow viewports and short viewport heights. Preserve touch target size and prevent action rows from clipping. Keep card rhythm consistent across the grid.

Prompt: accessibility review

Review text contrast, keyboard focus, labels, validation announcements, touch targets and motion. Aim for WCAG AA contrast: 4.5:1 for normal text and 3:1 for large text, with clear non-text control boundaries. Avoid color-only state differences. Give icon buttons accessible names, preserve logical reading order, and provide reduced-motion behavior. Document any remaining issue rather than claiming conformance without testing.

Prompt: consistency review

Audit typography, icon strokes, spacing, component radii and surface treatment. Identify duplicated styles and conflicting overrides. Recommend component-scoped rules and token bindings. Preserve intentional rounded dialogs, circular badges and straight dividers instead of applying a universal radius to every element.

Component delivery prompt

Copy-ready prompt / final design-system output

Prompt: assemble the design-system library

Deliver an organized Amzad Food design library with these groups: Foundations, Navigation, Product Discovery, Purchase Controls, Forms, Overlays and Feedback. Use clear component names and variant properties. Include component anatomy, token bindings, default dimensions, responsive behavior and usage guidance. Provide realistic English/Bangla sample content and use approved imagery where available. Mark dummy artwork and demo values in annotations.

Library group	Required component examples
Foundations	Color roles, type styles, spacing, radius, borders, shadows, icon and imagery rules.
Navigation	Desktop header, mobile header, support strip, menu, category rail and bottom navigation.
Discovery	Product card, quantity pills, image preview, search field/results, filters, sort and pagination.
Purchase and forms	Primary/outlined/icon buttons, price group, cart line, text field, +880 phone field, select and textarea.
Overlays and feedback	Offer dialog, quick view, drawer, toast, badge, inline error, empty state and skeleton.

Prompt: document interactions

For each interactive component, describe the trigger, visible response, keyboard behavior and next state. Demonstrate variant selection, search results, cart additions, validation, dialog dismissal and empty results. Label future API-dependent states as proposed when they are not implemented in the current frontend.

Prompt: final quality check

Before delivery, verify that the library uses lightweight typography, a calm green-and-cream foundation, restrained orange actions, consistent spacing and legible bilingual content. Check every component at desktop and mobile widths. Include a short Do / Avoid guide, a list of dummy assets needing replacement and any unresolved decisions. Keep the final deliverable focused on design foundations, components and style guidance.

Reference direction: current Amzad Food local project, commit 62c07a3. This prompt library intentionally excludes project architecture, full-screen specifications and operational backend scope.
